

LANDCARE MED PROJECT aims at providing the involved rural municipalities with appropriate tools and methodology to develop integrated strategies and exchange good practices in the field of rural waste management. The actors engaged in the project will implement a waste recycle system thanks to which any kind of residual will be rationally reused. To serve such a purpose a small-scale Rural Waste Management Approach will be adopted.

# LANDCARE MED Project

*“Mediterranean cross-border network for local rural governance improvement to enhance rural waste management”*
